Subject: RoC

TWIMC,

As an agricultural toxicologist, I don't believe there is much utility in the inclusion of captafol in the 12th RoC edition. This material has been cancelled for some time, and is used nowhere in the U.S. There does appear to be some tolerances remaining (tomato, potato, onion), but these do not appear to be import tolerances. I would suggest focusing your resources on naturally-occurring carcinogens (such as fungal metabolites) that are always present in our food stream.

Sincerely,

Mark Mossler, M.S.
